Winder MK 1D (depth counter)

Applications

Ideally suited for use with our range of samplers, our winders are designed and made with the safety and convenience of operators in mind.

The MK 1D Winder was developed in order to meet the need for lifting and lowering the heavier samplers within our range. The design includes a reduction gear drive between the winding handle and the reel, to reduce the effort required by the operator. It is equipped with up to 100m stainless steel cable.

This version of the winder includes our new auto-lock winding handle, for added safety. It also includes a mechanically-driven depth counter, to enable the operator to see the depth of the sampler at all times.

The winder is also fitted with a support leg and cable wiper.

The cable is stainless steel, avoiding the contamination that can occur with ropes and chains, and the special hook minimises the risk of a sampler becoming detached from the winder. The hook and cable, together with the winder's earthing strap, ensure electrical continuity and prevent the build-up of static electricity in the sampling system.

MK 1D with cable wiper and Depth Counter

Specifications

Cable Length and Diameter	100m x 2mm	Weight of Winder	5.5kg
Recommended sampler size	Up to 2.5 Litres	Materials	Stainless Steel with Brass Guides
