

UK Sampling Gauges Ltd

Designers and manufacturers of
environmentally safe precision sampling equipment
for liquids

and

Providers of sub-contract machining and assembly work
to customer requirements

Our Quality Policy

We want our high standards of Quality – whether of product, service, process or personnel – to be readily recognised by our customers, our suppliers, and everyone associated with us. We are therefore committed to ensuring that the end product of all our work achieves a standard that complies with both contractual and legislative requirements, and which consistently exceeds customer expectations.

We recognise that the maintenance and improvement of standards and processes in our work is essential:

- for our success, our reputation, and our future,
- for the professional satisfaction of colleagues,
- for the delight of our customers, and
- to our standing in the community.

To realise this aim, we have developed a Quality Management System which meets these needs and the requirements of BS/EN/ISO 9001:2015 and which we will review for continuing suitability. With the addition of ATEX / IECEx Certification of our products, our Quality Management System has been extended to meet the extra requirements of BS/EN/ISO/IEC 80079-34:2020.

Our top management is responsible for setting and reviewing the quality objectives for the business, for providing sufficient time and resource to achieve them, and for ensuring the continual improvement of the Quality Management System.

It is the responsibility of all staff to understand, conform to and contribute to the requirements of this philosophy and its associated working practices.

R. Kimonides - Director
